Profile

Data Scientist Engineer specializing in **Deep Learning**, **Computer Vision**, and **NLP**. Skilled in Python, TensorFlow, PyTorch, and other machine learning frameworks. Seeking an opportunity to develop and deploy AI solutions.

Skills

Machine Learning Python, Scikit-learn, MLflow, R
Deep Learning PyTorch, TensorFlow
Cloud Google Cloud Platform

Web Development HTML, CSS, JavaScript, Django
Data Management SQL, Spark
DevOps Git, Kubernetes, Docker, Airflow, CI/CD

Experience

Generali

April – October 2024

Data Scientist - Internship

- Detected fraudulent insurance claims and streamlined their management via a graphical interface.
- Designed a hybrid detection process combining statistical and AI methods.
- Built a machine learning model trained on historical fraud data.
- Addressed data imbalance using undersampling and oversampling techniques.
- Automated fraud alerts and integrated them into a graphical interface for simplified handling.
- Achieved cost savings and identified over 50% of fraudulent claims.

🛠️ Python, Spark, GitLab, Hadoop, Trello, Airflow.

National Center for Scientific Research (CNRS)

April – August 2023

AI Researcher - Internship

- Evaluated AI systems' performance on tasks simulating human intelligence (IQ tests).
- Used the [ARCathon](#) challenge as a benchmark for model generalization.
- Explored advancements in few-shot learning through research papers.
- Developed a hybrid symbolic/neural AI approach inspired by human reasoning.
- Solved 57 complex tasks using the hybrid model, trained on 2 GPUs over 3 days.

🛠️ Python, PyTorch, GitHub.

Education

IMT Atlantique

2021–2024

Data Science & AI: Machine Learning, Statistics, Graph Theory, Stochastic Analysis, Numerical Optimization

DevOps: Cloud Deployment, Docker, Big Data

Preparatory Classes for Engineering Schools

2019–2021

Mathematics, Physics, and Engineering Science (MPSI-MP*)

Certifications

- **Machine Learning Course** - [Structuring Machine Learning Projects](#)
- **Data Science Competition** - [Finalist in SAS Curiosity Cup 2024](#)

Projects

EY Open Science Data Challenge

February – May 2023

- Classified rice fields in Vietnam using satellite data as part of an EY-organized challenge.
- Collected, preprocessed, and analyzed satellite data for deep learning model training.
- Designed and trained a recurrent deep learning model for rice field classification.
- Optimized the model and achieved the best results.
- Secured 1st place in France after presenting the project and business plan to an EY jury.

AI Racing

January – March 2024

- Develop a machine learning model to navigate an autonomous car through a course using camera images.
- Combine computer vision techniques with deep reinforcement learning.
- Optimize the model to handle constraints such as image quality issues (reflections on the ground, low resolution).
- Train the model on a simulator before fine-tuning it using a transfer learning approach.

🏆 Demonstrated excellent performance on the course and secured 1st place as the best project of the year.
